

STUDY MUSE AI

The AI Study Schedule Builder

Give it your exam date and your subjects. This is how
you turn that into an actual day-by-day study plan —
no generic template required.

*"A study plan built around your exam beats a template
built around nobody's."*

STUDY MUSE AI

A Real Input → Output Tool

Read this first

This isn't a generic weekly planner grid. It's a method: you plug in your exam date, your subjects, and how much time you actually have, and the formulas and AI prompts in this kit turn that into a specific schedule built around your real situation. Do the math once, and you have a plan for the whole run-up to exam day.

What you'll build:

- ☐ A clear count of study days and hours actually available
- ☐ A subject-by-subject time allocation based on difficulty and weight
- ☐ A week-by-week schedule from today until exam day
- ☐ An AI-generated daily breakdown you can regenerate any time your plan changes

Your Inputs

Fill this in first — everything else is built from these numbers

Input	Your answer
Exam date	
Today's date	
Days until exam	
Realistic study hours per day (be honest)	
Total study hours available (days × hours/day)	

Subject Weighting

Not every subject deserves equal time

Subject/topic	Difficulty for you (1-5)	Weight on the exam (1-5)	Priority score (difficulty × weight)

Allocating Your Hours

Add up all priority scores. Each subject's share of your total study hours = its priority score ÷ total priority score. A subject with double the priority score of another should get roughly double the study time.

Your Week-by-Week Map

Divide total study time into phases

Phase	Focus	Approx. % of remaining time
First half of your timeline	Learning/relearning material, weakest subjects first	50%
Second-to-last week	Practice problems, active recall, past exams	30%
Final week	Review, weak-spot patching, light practice only	20%

Your Phase Dates

Phase	Start date	End date
Learning phase		
Practice phase		
Review phase		

Generate Your Daily Breakdown With AI

This is where the plan becomes specific to your actual days

"I'm studying for [exam name] on [exam date]. My subjects, in priority order, are: [list them with priority scores from Step 2]. I have [X] study hours per day available. Build me a day-by-day schedule from today until my exam, following this structure: [paste your phase dates from Step 3]. Include which subject to study each day and roughly how long."

"Here's the schedule you just built me: [paste it]. I have [specific constraint – a work shift, a family event, etc.] on [date]. Adjust the schedule around that without cutting my weakest subject's time."

[illegible]

Re-Running the Plan

Life happens — regenerate, don't abandon

If you fall behind or your schedule changes, don't scrap the whole plan. Go back to Step 1, update "days until exam" and "total study hours available," and re-run the Step 4 prompt with your updated numbers. The method stays the same — only the inputs change.

Weekly Re-Check

Every week, ask: am I on pace with my priority scores? If a subject is falling behind, that's the one to protect time for next week, not the one that's already easy.

PLAN BUILT

A Schedule Built Around You

Not a generic grid — a plan based on your actual exam,
your actual subjects, and your actual time.
