The Finals Week Survival System

For when it's not one exam — it's four, in five days. A triage system for the week everything is due at once.

*"You can't give every exam equal energy this week.
That's the whole point of triage."*

WELCOME

Triage, Not Panic

Read this first

Finals week isn't the time to study everything equally — it's the time to be ruthless about where your limited hours go. This short system helps you triage your exams by urgency and difficulty, build a realistic multi-exam schedule, and protect the sleep and basics that actually determine how well you perform.

Triage Your Exams

Not all exams need equal prep time

Exam	Date/time	How prepared you already feel (1-5)	How much it's worth (grade weight)	Priority

The Rule

Lowest preparedness + highest weight = highest priority for your remaining hours. An exam you already feel solid on gets a light review, not equal time.

Your Multi-Exam Schedule

Block by exam, not by vague "study time"

Day	Morning	Afternoon	Evening

AI companion prompt: "I have these exams this week: [list exams, dates, and priority from Step 1]. Help me build an hour-by-hour schedule for the next [X] days that gives more time to my highest-priority exams without leaving zero time for the others."

Protecting the Basics

The non-negotiables, even during finals week

- ☐ At least 6 hours of sleep — an all-nighter costs more the next day than it gains tonight
- ☐ One real meal, not just coffee and snacks
- ☐ A 10-minute break every hour or two — your retention drops hard past that
- ☐ Water within reach, always

When You Feel Like You're Drowning

Stop, breathe, and re-do Step 1. Overwhelm during finals week is almost always a triage problem, not a "you're not working hard enough" problem — recheck your priorities instead of just pushing harder.

S U R V I V E D

One Week Down, With a System Behind It

Not by studying everything equally — by knowing
exactly where your hours needed to go.
