

HER NEW ERA

The Habit & Routine Builder

Design mornings and evenings that run without
willpower — so becoming her stops depending on
motivation.

*"You don't need more discipline. You need a better
default."*

HER NEW ERA AI

Routines Over Willpower

Read this first

Most habit plans fail because they ask you to rely on motivation, which is the least reliable resource you have. This builder works differently — it designs your morning and evening around small, automatic defaults, then stacks habits onto things you already do, so consistency stops requiring effort.

What you'll build:

- ☐ A morning routine that fits your actual life, not a Pinterest version of it
- ☐ An evening wind-down that sets tomorrow up automatically
- ☐ A habit stack using triggers you already have
- ☐ A backup version of every routine for irregular schedules and rough days
- ☐ A 30-day tracker and an obstacle plan for the days it falls apart

The Habit Loop, in Plain Language

Understanding this makes everything else in this workbook easier

Every habit, good or bad, runs on the same three-part loop: a cue that kicks it off, a routine that follows, and a reward that tells your brain to repeat it next time. Most people try to change the routine in the middle without ever touching the cue or the reward — which is why it feels like pushing a boulder uphill. This workbook works because it starts with the cue (the trigger you already have) and keeps the reward small and immediate, so the routine in the middle barely has to be forced at all.

Part of the loop	What it means	Example
Cue	The trigger that starts the habit	Your feet hit the floor in the morning
Routine	The actual behavior	Drinking a full glass of water
Reward	What makes your brain want to repeat it	Feeling immediately more awake, checking it off

Map One Bad Habit's Loop

Pick a habit you already have that you'd like to change. What's the actual cue? What reward is it giving you, even if it's not a good one long-term?

Habit	Cue	Reward it's giving you

Design Your Morning Routine

Start with the minimum, not the fantasy

Step 1 · Your Real Wake-Up Window

What time do you actually get up on a normal day? Not the goal — the truth.

.....

Step 2 · The Non-Negotiable Three

Pick three morning actions — small enough to do half asleep — that set your tone for the day.

Order	Action	Time it takes
1		
2		
3		

Step 3 · Remove One Friction Point

What's one thing that makes your mornings harder than they need to be (phone in bed, no clean clothes ready, no breakfast plan)?
Fix it once this week.

.....

Design Your Evening Wind-Down

Tomorrow starts tonight

Step 1 · Your Shutdown Time

Pick a consistent time to start winding down — not lights-off, just the beginning of the transition.

.....

Step 2 · The Three-Minute Reset

Before bed: lay out tomorrow's essentials, glance at tomorrow's calendar, write one thing you're proud of today.

Action	Trigger (right after ____)
Lay out essentials	
Glance at calendar	
Write one win	

Step 3 · Screen Boundary

What's one realistic (not perfect) boundary you'll set with your phone in the last 30 minutes before sleep?

.....

Habit Stacking

Attach new habits to what already happens automatically

Formula: "After I [existing habit], I will [new habit]." Keep the new habit small enough that skipping it would feel silly.

After I...	I will...	Category

AI companion prompt: "Here's my current daily routine: [list it]. Help me find 3 natural places to stack a new habit of [habit] without adding extra time or friction."

The Habit Menu

Steal from this list any time a habit needs replacing

Don't overthink which habit to start with. Pick the smallest option below in each category and upgrade later once it's automatic.

Category	Starter (30 seconds)	Level 2 (2–5 minutes)
Body	10 squats or one glass of water	A 10-minute walk or short stretch
Mind	3 things you're grateful for	One journal page or 5 minutes of stillness
Money	Check one account balance	Log the day's spending or move \$5 to savings
Connection	Text one person something specific	A 10-minute call with no scrolling
Home	Clear one surface	A 5-minute reset of one room

If Your Schedule Changes Week to Week

Shift work, irregular hours, and unpredictable weeks make time-based routines fall apart fast. Instead of anchoring habits to a clock time, anchor them to an event that happens no matter what — waking up, your commute, your first meal, getting home. Rewrite your triggers below using only events, not times.

Habit	Old trigger (a time)	New trigger (an event)

30-Day Consistency Tracker

Mark it. Don't judge it.

[illegible][illegible][illegible]

When It Falls Apart

Plan for the bad days now, while you're thinking clearly

The 2-Day Rule

Never miss the same habit two days in a row. One miss is human. Two starts a new pattern. Write your "minimum viable version" of each routine for rough days.

Routine	Minimum viable version (30 seconds or less)
Morning	
Evening	
Stacked habit	

Monthly Check-In

What's working? What needs to get smaller? What are you ready to build on top of?

Common Excuses and Honest Answers

What you tell yourself	What's usually actually true
"I don't have time"	The habit is bigger than 2 minutes — shrink it again
"I'll start Monday"	Starting mid-week removes the pressure of a "perfect" start you're avoiding
"I already messed up today"	One habit missed doesn't cancel the others — do the next one anyway

Building Your Own Routine From Scratch

Use this page any time you want to design a new routine beyond morning and evening

Step	Your notes
1. Name the routine (workout day, Sunday reset, payday ritual...)	
2. What's the trigger that starts it?	
3. What are the 3 smallest actions inside it?	
4. What's the immediate reward when it's done?	
5. What's the 30-second minimum version for a bad day?	

CONSISTENCY, BUILT IN

Your Days Now Run Without You Forcing Them

That's the whole point. Small, automatic, repeatable —
that's what actually changes a life.

*Pair this with the Goal-to-Action Life Planner to turn
your new consistency into real progress.*
