The 30-Day Exam Countdown

A day-by-day structure for the month before your exam — so "I should probably start studying" turns into an actual plan.

"Thirty days is enough time, if you don't waste the first twenty of them."

STUDY MUSE AI

Four Weeks, Four Jobs

Read this first

Thirty days feels like plenty of time until week three arrives and you've barely started. This countdown assigns each week a specific job, so the pressure builds gradually instead of arriving all at once in the final 48 hours.

Week	Job
Week 1 (Days 30-22)	Map the material, start with your weakest subject
Week 2 (Days 21-15)	Learn the remaining material, begin practice questions
Week 3 (Days 14-8)	Full practice run, targeted review of gaps
Week 4 (Days 7-0)	Light review, rest, exam day

Days 30–22: Map & Start

Day	Focus	Done
30	List every topic the exam covers	
29	Rank topics by difficulty and exam weight	
28–25	Start studying your weakest, highest-weight topic	
24–22	Continue weakest topics, gather all materials/notes needed	

Days 21–15: Learn & Begin Practice

Day	Focus	Done
21–18	Move to your next-priority topics	
17–15	Start light practice questions on topics already covered	

Mid-Countdown Check

By Day 15, roughly half your topics should have had at least one real study session. If you're behind, that's useful to know now, not on Day 5.

.....

Days 14–8: Practice & Patch Gaps

Day	Focus	Done
14–12	Finish learning any remaining new material	
11	Full practice exam under real conditions	
10–8	Review only what the practice exam revealed as weak	

AI companion prompt: "I just took a practice exam and got these wrong: [list them]. Help me prioritize which of these to review first based on how likely they are to reappear."

Days 7–0: Review & Rest

Day	Focus	Done
7–5	Light review of weak spots only, short sessions	
4–3	A second, shorter practice run if time allows	
2	Final review of your weakest topic, then stop studying	
1	Rest. Light review of key formulas/facts only. Sleep well.	
0	Exam day.	

Why Day 1 Is Rest, Not Cramming

Sleep consolidates memory more effectively than a final all-nighter adds new information. If you've followed the countdown, the material is already in — protect your ability to access it clearly tomorrow.

COUNTDOWN COMPLETE

Thirty Days, Used Well

Not a scramble at the end — a build that gave every week its own job.

Continue with the Finals Week Survival System if this is one of several exams at once.
